_short version

- We are minic studio.
- We are friends and colleagues.
- We are from Romania.
- We are a web development, and online communication firm / agency, focusing mostly on web based technologies.
- We have experiences in saas product development.
- We love html, css, php (laravel), JavaScript (React).
- Our differences makes us stronger.
- We love to encourage each other, and empover to develop professionally and to love our job.
- We love bullets.

_not so long version

Since 2011 we have been working to serve our local and international partners at the highest possible level, by offering web-based solutions, graphic design and online marketing services.

Since the beginning we have been constantly trying to encourage each other, to evolve professionally and to love our job.

Skill based we have a fairly diverse team, from graphic designers, to front-end developers and marketing specialists.

Based on your needs we are more than willing to have a skype and discuss about project specifications and personalised hourly rates.

We have tried to select some of our projects that we are proud of, but to be honest the list is not complete. We tend to believe that a technical conversation tells more than a mockup on a blank page with a fancy description below.

If you feel like you can take a visit on our website minic.ro and facebook page fb.com/minic.studio (the most of the Facebook content is in hungarian.)

_dev_team

P1_Lead_Developer	Stack
<p>Antal Levente</p> <p>Position Cto</p> <p>About I like to work with new, interesting projects, where experimentation is required and best practices fails. I enjoy to build projects, solutions from scratch, figure out the tiny details and solve the annoying issues, what others can't.</p>	<p>Prestashop PHP (OOP, Laravel) MySQL JavaScript (Plain, jQuery) CSS (BEM), HTML Project management (Jira, Bitbucket, Trello, Agile, Scrum) Version control (git) linux, mac Google Cloud Apache Websocket (Pusher, Socket.io, MQTT) React, Webpack, npm Node.js Bootstrap Other: SVG, OAuth2.0, JWT, composer, xDebug, New relic, REST</p>
